Projects

Phishing and OSINT Threat Intelligence Tool | *Python, VirusTotal API, AbuseIPDB, WHOIS, Telegram bot*

- Built multi-API threat intelligence pipeline in Python that submits suspicious URLs and IPs to VirusTotal, AbuseIPDB and URLScan.io and cross-references WHOIS registration age, DNS records and SSL details to produce a phishing analysis report.
- Implemented a typosquatting domain detector in Python that generates character-substitution variants of brand domains and checks live DNS resolution to create a brand-impersonation detection log.
- Deployed a Telegram bot interface in Python that enables analysts to submit URLs for live IOC enrichment, supports bulk CSV input and output, and adds OSINT enrichment via theHarvester to generate an enriched IOC file.

Vulnerability Scanner and Patch Prioritization Engine | *Python, Bash, Nessus, OpenVAS, NVD API*

- Built an automated vulnerability assessment pipeline in Python that integrates Nessus and OpenVAS REST APIs, pulls CVE data from the NVD API and adds EPSS context from the FIRST.org API to produce a CVSS severity report.
- Developed an OWASP Top 10 automated web checker in Python that sends crafted HTTP requests to detect injection, broken authentication and SSRF vulnerabilities and documents findings in a SQL injection exploit documentation.
- Automated scan scheduling with Bash and cron, added delta-scan logic to flag newly discovered CVEs and organized results into patch compliance evidence.
