| <b>SOC Automation and Threat Detection Lab   Python, Splunk, Wireshark, Nmap, MITRE ATT&amp;CK</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                               |
| <ul style="list-style-type: none"><li>• Deployed Splunk SIEM with SPL searches for brute-force detection, lateral movement, and privilege escalation; mapped TTPs to MITRE ATT&amp;CK and wrote PICERL incident report using Python, Splunk, and Wireshark.</li><li>• Developed SOAR-style detection pipeline using Python, Splunk, and VirusTotal API, ingesting Splunk alerts, enriching with IOC data, and dispatching Telegram notifications with severity classification.</li><li>• Converted detection logic to Sigma rules using Python, Splunk, and Wireshark; analyzed TCP/IP for SYN scans, DNS tunnelling, and plaintext credential exposure.</li></ul> |                                               |
| <b>Vulnerability Scanner and Patch Prioritization Engine  </b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <i>Python, Bash, Nessus, OpenVAS, NVD API</i> |
| <ul style="list-style-type: none"><li>• Developed automated vulnerability assessment pipeline integrating Nessus and OpenVAS REST APIs using Python, generating CVE reports with CVSS severity and EPSS context from FIRST.org and NVD APIs.</li><li>• Developed OWASP Top 10 automated web checker using Python and Bash, detecting injection, auth, and SSRF vulnerabilities.</li><li>• Automated scan scheduling using Bash and cron; built delta-scan logic to flag new CVEs and track patch compliance with Nessus, OpenVAS, and NVD API.</li></ul>                                                                                                           |                                               |

## Technical Skills

**SOC Operations:** Alert triage, incident investigation, log analysis, threat detection, escalation, false positive analysis  
**SIEM & Monitoring:** Splunk (SPL), Elastic SIEM (basic), Windows Event Logs, Sysmon, Wireshark  
**Threat Intelligence:** MITRE ATT&CK, IOC analysis, VirusTotal, OSINT enrichment, Cyber Kill Chain  
**Systems & Networking:** Windows internals, Linux fundamentals, TCP/IP, DNS, HTTP/S, firewall and IDS/IPS concepts  
**Automation:** Python, Bash (basic), regular expressions, security

## Certifications

- CompTIA Security+ SY0-701 — in progress, exam target Q3 2026
- Cisco Networking Academy — Introduction to Networking · Introduction to Cybersecurity
