| <b><u>Phishing and OSINT Threat Intelligence Tool</u></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <i>Python, VirusTotal API, AbuseIPDB, WHOIS, Telegram bot</i> |
| <ul style="list-style-type: none"><li>• Developed multi-API threat intelligence pipeline using Python, submitting suspicious URLs/IPs to VirusTotal, AbuseIPDB, and URLScan.io, and cross-referencing WHOIS registration age, DNS records, and SSL details for phishing analysis.</li><li>• Implemented typosquatting domain detector generating character-substitution variants of brand domains and checking live DNS resolution for brand-impersonation analysis using Python, VirusTotal API, AbuseIPDB, and WHOIS.</li><li>• Deployed Telegram bot interface enabling analysts to submit URLs for live IOC enrichment using Python, Telegram bot, and theHarvester for domain profiling, supporting bulk CSV input/output for incident response workflows.</li></ul> |                                                               |
| <b><u>Vulnerability Scanner and Patch Prioritization Engine</u></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <i>Python, Bash, Nessus, OpenVAS, NVD API</i>                 |
| <ul style="list-style-type: none"><li>• Built automated vulnerability assessment pipeline integrating Nessus and OpenVAS REST APIs in Python, generating CVE reports classified by CVSS severity and EPSS context from the FIRST.org API.</li><li>• Developed OWASP Top 10 automated web checker that sends crafted HTTP requests to detect injection, broken auth, and SSRF vulnerabilities using Python, and documented SQL injection exploit and parameterised query remediation.</li><li>• Automated scan scheduling via Bash and cron, and built delta-scan logic to flag newly discovered CVEs and organize patch compliance tracking evidence using Python, Nessus, and OpenVAS.</li></ul>                                                                         |                                                               |

## Technical Skills

**GRC & Compliance:** NIST CSF, ISO 27001, PCI-DSS, GDPR/PDPB, SOX/ITGC, compliance monitoring  
**Risk & Audit:** Risk assessment, control testing, audit documentation, vendor risk, RCSA basics  
**Fraud & AML:** Transaction monitoring, AML typologies, KYC/CDD, sanctions screening  
**Systems & Tools:** Windows internals, Linux fundamentals, Python, Excel, SQL (basic), TCP/IP basics  
**Frameworks:** MITRE ATT&CK, OWASP Top 10, Incident Response (PICERL), audit trail documentation

## Certifications

- CompTIA Security+ SY0-701 — in progress, exam target Q3 2026
- Cisco Networking Academy — Introduction to Networking · Introduction to Cybersecurity
