Projects

Phishing and OSINT Threat Intelligence Tool | *Python, VirusTotal API, AbuseIPDB, WHOIN, Telegram bot*

- Built multi-API threat intelligence pipeline in Python that submits suspicious URLs and IPs to VirusTotal, AbuseIPDB, and URLScan.io and cross-references WHOIS registration age, DNS records, and SSL details for phishing analysis report.
- Implemented typosquatting domain detector in Python that generates character-substitution variants of brand domains and checks live DNS resolution for brand-impersonation analysis resulting in a typosquatting detection list.
- Deployed Telegram bot interface in Python enabling analysts to submit URLs for live IOC enrichment, supports bulk CSV input and output for incident response workflows and includes OSINT enrichment via theHarvester for domain profiling and enriched IOC payload.

Vulnerability Scanner and Patch Prioritization Engine | *Python, Bash, Nessus, OpenVAS, NVD API*

- Built automated vulnerability assessment pipeline in Python that integrates Nessus and OpenVAS REST APIs and generates CVE reports classified by CVSS severity and EPSS context from the FIRST.org API resulting in a CVSS and EPSS enriched vulnerability report.
- Developed OWASP Top 10 automated web checker in Python that sends crafted HTTP requests to detect injection, broken auth, and SSRF vulnerabilities and documented SQL injection exploit and parameterised query remediation in a documented exploit proof file.
- Automated scan scheduling with Bash and cron, built delta-scan logic to flag newly discovered CVEs and organize patch compliance tracking evidence in a patch compliance evidence archive.
