| <b>SOC Automation and Threat Detection Lab</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <i>Python, Splunk, Wireshark, Nmap, MITRE ATT&amp;CK</i>      |
| <ul style="list-style-type: none"><li>• Deployed Splunk SIEM with SPL correlation searches for brute-force detection, lateral movement, and privilege escalation; mapped TTPs to MITRE ATT&amp;CK and wrote PICERL incident report.</li><li>• Built automated detection pipeline using Python script that ingests Splunk alerts, runs IOC enrichment via VirusTotal API, and dispatches Telegram notifications with severity classification.</li><li>• Converted detection logic to Sigma rules for vendor-neutral format used by enterprise SOCs; performed TCP/IP analysis in Wireshark to detect SYN scans, DNS tunnelling, and plaintext credential exposure on unencrypted sessions.</li></ul> |                                                               |
| <b>Phishing and OSINT Threat Intelligence Tool</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <i>Python, VirusTotal API, AbuseIPDB, WHOIS, Telegram bot</i> |
| <ul style="list-style-type: none"><li>• Built multi-API threat intelligence pipeline that submits suspicious URLs/IPs to VirusTotal, AbuseIPDB, and URLScan.io; cross-references WHOIS registration age, DNS records, and SSL details for phishing analysis.</li><li>• Implemented typosquatting domain detector generating character-substitution variants of brand domains and checking live DNS resolution for brand-impersonation analysis.</li><li>• Deployed Telegram bot interface enabling analysts to submit URLs for live IOC enrichment; supports bulk CSV input/output for incident response workflows and includes OSINT enrichment via theHarvester for domain profiling.</li></ul>   |                                                               |

## Technical Skills

**SOC Operations:** Alert triage, incident investigation, log analysis, threat detection, escalation, false positive analysis  
**SIEM & Monitoring:** Splunk (SPL), Elastic SIEM (basic), Windows Event Logs, Sysmon, Wireshark  
**Threat Intelligence:** MITRE ATT&CK, IOC analysis, VirusTotal, OSINT enrichment, Cyber Kill Chain  
**Systems & Networking:** Windows internals, Linux fundamentals, TCP/IP, DNS, HTTP/S, firewall and IDS/IPS concepts  
**Automation:** Python, Bash (basic), regular expressions

## Certifications

- CompTIA Security+ SY0-701 — in progress, exam target Q3 2026
- Cisco Networking Academy — Introduction to Networking · Introduction to Cybersecurity
