- Implemented typosquatting domain detector generating character-substitution variants of legitimate business domains and checking live DNS resolution for financial fraud infrastructure review.
- Deployed Telegram bot interface for live suspicious entity enrichment supporting bulk CSV input/output for investigation workflows; includes OSINT enrichment via theHarvester for domain profiling.

**Vulnerability Scanner and Patch Prioritization Engine** | *Python, Bash, Nessus, OpenVAS, NVD API*

- Built automated vulnerability assessment pipeline integrating Nessus and OpenVAS APIs in Python; generated audit-ready CVE reports classified by CVSS severity with EPSS context from the FIRST.org API.
- Developed OWASP Top 10 automated compliance checker validating web application security controls against regulatory requirements; documented vulnerability-to-remediation audit trails including SQL injection evidence and parameterised query fixes.
