Work Experience

Support Operations Specialist *Jun. 2024 – Jan. 2026*
Amazon FBA *Bengaluru, India*

- Triaged 50+ weekly inventory reimbursement cases by severity and policy eligibility, applying structured triage and escalation workflow, producing a security-ready case queue.
- Investigated root causes of seller claims, identified policy violations and anomalous patterns, and escalated findings to senior reviewers for timely security escalation.
- Documented audit-ready case records with investigation findings, evidence notes, and corrective actions, creating a searchable security evidence repository.
- Detected recurring fraud patterns across 200+ weekly cases, flagging them early and reducing repeat-issue investigation time before escalation.

Projects

Vulnerability Scanner and Patch Prioritization Engine | *Python, Bash, Nessus, OpenVAS, NVD API*

- Built automated vulnerability assessment pipeline integrating Nessus and OpenVAS REST APIs in Python and generated CVE reports classified by CVSS severity and EPSS context from the FIRST.org API as an EPSS-enhanced CVE report.
- Developed OWASP Top 10 automated web checker that sends crafted HTTP requests to detect injection, broken auth and SSRF vulnerabilities and documented SQL injection exploit and parameterised query remediation as a remediation guide.
- Automated scan scheduling via Bash and cron and built delta-scan logic to flag newly discovered CVEs and organize patch compliance tracking evidence as patch compliance evidence.

SOC Automation and Threat Detection Lab | *Python, Splunk, Wireshark, Nmap, MITRE ATT&CK*

- Deployed Splunk SIEM with SPL correlation searches for brute-force detection, lateral movement and privilege escalation and mapped TTPs to MITRE ATT&CK and wrote PICERL incident report as an incident report.
- Built automated SOAR-style detection pipeline: Python script ingests Splunk alerts, runs IOC enrichment via VirusTotal API and dispatches Telegram notifications with severity classification as a Telegram notification.
- Converted detection logic to Sigma rules and performed TCP/IP analysis in Wireshark to detect SYN scans, DNS tunnelling and plaintext credential exposure on unencrypted sessions as a Sigma rule set.
