| <b><u>Phishing and OSINT Threat Intelligence Tool</u></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <i>Python, VirusTotal API, AbuseIPDB, WHOIS, Telegram bot</i> |
| <ul style="list-style-type: none"><li>• Developed multi-API threat intelligence pipeline using Python, submitting suspicious URLs/IPs to VirusTotal, AbuseIPDB, and URLScan.io, and cross-referencing WHOIS registration age, DNS records, and SSL details for phishing analysis.</li><li>• Implemented typosquatting domain detector generating character-substitution variants of brand domains and checking live DNS resolution for brand-impersonation analysis using AbuseIPDB and WHOIS.</li><li>• Deployed Telegram bot interface enabling analysts to submit URLs for live IOC enrichment, supporting bulk CSV input/output for incident response workflows and including OSINT enrichment via theHarvester for domain profiling.</li></ul> |                                                               |
| <b><u>Vulnerability Scanner and Patch Prioritization Engine</u></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <i>Python, Bash, Nessus, OpenVAS, NVD API</i>                 |
| <ul style="list-style-type: none"><li>• Built automated vulnerability assessment pipeline integrating Nessus and OpenVAS REST APIs in Python, generating CVE reports classified by CVSS severity and EPSS context from the FIRST.org API.</li><li>• Developed OWASP Top 10 automated web checker that sends crafted HTTP requests to detect injection, broken auth, and SSRF vulnerabilities, documenting SQL injection exploit and parameterised query remediation.</li><li>• Automated scan scheduling via Bash and cron, building delta-scan logic to flag newly discovered CVEs and organize patch compliance tracking evidence using Nessus and OpenVAS.</li></ul>                                                                             |                                                               |

## Technical Skills

**GRC & Compliance:** NIST CSF, ISO 27001, PCI-DSS, GDPR/PDPB, SOX/ITGC, compliance monitoring  
**Risk & Audit:** Risk assessment, control testing, audit documentation, vendor risk, RCSA basics  
**Fraud & AML:** Transaction monitoring, AML typologies, KYC/CDD, sanctions screening  
**Systems & Tools:** Windows internals, Linux fundamentals, Python, Excel, SQL (basic), TCP/IP basics  
**Frameworks:** MITRE ATT&CK, OWASP Top 10, Incident Response (PICERL), audit trail documentation

## Certifications

- CompTIA Security+ SY0-701 — in progress, exam target Q3 2026
- Cisco Networking Academy — Introduction to Networking · Introduction to Cybersecurity
