Projects

Phishing and OSINT Threat Intelligence Tool | *Python, VirusTotal API, AbuseIPDB, WHOIS, Telegram bot*

- Built multi-API threat intelligence pipeline in Python that submits suspicious URLs and IPs to VirusTotal and AbuseIPDB and URLScan.io and cross-references WHOIS registration age, DNS records and SSL details to generate a phishing analysis report.
- Implemented typosquatting domain detector in Python that generates character-substitution variants of brand domains and checks live DNS resolution to produce a brand-impersonation analysis.
- Deployed Telegram bot interface in Python that enables analysts to submit URLs for live IOC enrichment, supports bulk CSV input and output for incident response workflows and includes OSINT enrichment via theHarvester for domain profiling.

Vulnerability Scanner and Patch Prioritization Engine | *Python, Bash, Nessus, OpenVAS, NVD API*

- Built automated vulnerability assessment pipeline in Python that integrates Nessus and OpenVAS REST APIs, generates CVE reports classified by CVSS severity and enriches them with EPSS context from the FIRST.org API to produce an EPSS enriched CVE report.
- Developed OWASP Top 10 automated web checker in Python that sends crafted HTTP requests to detect injection, broken authentication and SSRF vulnerabilities and documents SQL injection exploit with remediation documentation.
- Automated scan scheduling with Bash and cron, added delta-scan logic to flag newly discovered CVEs and organized patch compliance tracking evidence.
