Projects

International KYC Associate |

Structured escalation, severity-based prioritization, audit documentation, pattern

recognition, Python, Splunk, Wireshark, Nmap, MITRE ATT&CK

- Developed severity-based prioritization logic using structured escalation and pattern recognition. Deployed Splunk SIEM with SPL correlation searches for brute-force detection, lateral movement, and privilege escalation (T1110, T1078, T1059).
- Built automated SOAR-style detection pipeline: ingests Splunk alerts, enriches with VirusTotal API, dispatches Telegram notifications with severity classification.
- Converted detection logic to Sigma rules; analyzed TCP/IP traffic in Wireshark for SYN scans, DNS tunnelling, and plaintext credential exposure.

International KYC Associate |

Structured escalation, severity-based prioritization, audit documentation, pattern

recognition, Python, Bash, Nessus, OpenVAS, NVD API

- Developed automated vulnerability assessment pipeline integrating Nessus and OpenVAS REST APIs in Python, generating CVE reports with CVSS severity and EPSS context from FIRST.org API.
- Developed OWASP Top 10 automated web checker to detect injection, auth, and SSRF vulnerabilities via crafted HTTP requests.
- Automated scan scheduling via Bash and cron; built delta-scan logic to flag newly discovered CVEs and organize patch compliance (remediation tracking) tracking evidence.
