Work Experience

Support Operations Specialist *Jun. 2024 – Jan. 2026*
Amazon FBA *Bengaluru, India*

- Triaged 50+ weekly inventory reimbursement cases by severity and policy eligibility, applying structured triage and escalation workflow, producing an audit-ready case queue.
- Investigated root causes of seller claims, identified policy violations and anomalous patterns, and escalated findings to senior reviewers, generating compliance escalation reports.
- Documented investigation findings, decisions, evidence notes, and corrective actions in audit-ready case files, creating a control-evidence repository.
- Identified recurring fraud patterns across case history and flagged them ahead of weekly review cycles, cutting repeat-issue re-investigation before escalation.

Projects

Phishing and OSINT Threat Intelligence Tool | *Python, VirusTotal API, AbuseIPDB, WHOIS, Telegram bot*

- Built multi-API threat intelligence pipeline in Python that submits suspicious URLs and IPs to VirusTotal, AbuseIPDB, and URLScan.io and cross-references WHOIS registration age, DNS records, and SSL details for phishing analysis, producing a consolidated phishing analysis report.
- Implemented typosquatting domain detector in Python that generates character-substitution variants of brand domains and checks live DNS resolution for brand-impersonation analysis, delivering a curated typosquatting detection list.
- Deployed Telegram bot interface in Python enabling analysts to submit URLs for live IOC enrichment, supporting bulk CSV input and output for incident response workflows and adding OSINT enrichment via theHarvester for domain profiling, resulting in an enriched IOC package.

Vulnerability Scanner and Patch Prioritization Engine | *Python, Bash, Nessus, OpenVAS, NVD API*

- Built automated vulnerability assessment pipeline in Python that integrates Nessus and OpenVAS REST APIs and generates CVE reports classified by CVSS severity and EPSS context from the FIRST.org API, creating a comprehensive vulnerability assessment report.
- Developed OWASP Top 10 automated web checker in Python that sends crafted HTTP requests to detect injection, broken authentication, and SSRF vulnerabilities and documents SQL injection exploit and parameterised query remediation, producing a detailed web security findings document.
- Automated scan scheduling with Bash and cron, added delta-scan logic to flag newly discovered CVEs and organize patch compliance tracking evidence, generating a patch compliance evidence bundle.
