## Education

|                                                                                                            |             |
|------------------------------------------------------------------------------------------------------------|-------------|
| <b>Presidency College</b><br><i>Master of Computer Applications (MCA) · CGPA 7.29 · Bengaluru, India</i>   | 2021 – 2023 |
| <b>St. Claret College</b><br><i>Bachelor of Computer Applications (BCA) · CGPA 7.21 · Bengaluru, India</i> | 2018 – 2021 |
| <b>St. Claret PU College</b><br><i>Higher Secondary (12th) · Bengaluru, India</i>                          | 2016 – 2018 |

## Work Experience

|                                                    |                                           |
|----------------------------------------------------|-------------------------------------------|
| <b>Support Operations Specialist</b><br>Amazon FBA | Jun. 2024 – Jan. 2026<br>Bengaluru, India |
|----------------------------------------------------|-------------------------------------------|

- Documented investigation findings and corrective actions in audit-ready case notes for compliance tracking.
- Analyzed seller claims to identify policy risk and validate decisions against control criteria.
- Investigated reimbursement cases for policy exceptions, flagging risk indicators and evidence gaps.
- Triaged weekly cases by severity and eligibility, supporting audit documentation and control review.

## Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                          |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|
| <b>SOC Automation and Threat Detection Lab</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <i>Python, Splunk, Wireshark, Nmap, MITRE ATT&amp;CK</i> |
| <ul style="list-style-type: none"><li>Deployed Splunk SIEM with SPL correlation (detection engineering) searches for brute-force detection (index=* failed   stats count by src_ip), lateral movement, and privilege escalation; mapped TTPs to MITRE ATT&amp;CK (TTP mapping) (T1110, T1078, T1059) and wrote PICERL incident report.</li><li>Built automated SOAR (security orchestration and automation)-style detection pipeline: Python script ingests Splunk alerts, runs IOC enrichment (threat intelligence) via VirusTotal API, and dispatches Telegram notifications with severity classification — reducing mean time to triage by automating repetitive L1 tasks.</li><li>Converted detection logic to Sigma rules (detection-as-code) (vendor-neutral format used by enterprise SOCs); performed TCP/IP analysis in Wireshark to detect SYN scans, DNS tunnelling, and plaintext credential exposure on unencrypted sessions.</li></ul> |                                                          |
| <b>Vulnerability Scanner and Patch Prioritization Engine</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <i>Python, Bash, Nessus, OpenVAS, NVD API</i>            |
| <ul style="list-style-type: none"><li>Built automated vulnerability assessment pipeline integrating Nessus and OpenVAS REST APIs in Python; generates CVE reports classified by CVSS severity (vulnerability prioritisation); implemented EPSS scoring (exploit probability scoring) from FIRST.org API to prioritise by actual exploit probability — a metric rarely used by freshers.</li><li>Developed OWASP Top 10 (web application security) automated web checker that sends crafted HTTP requests to detect injection, broken auth, and SSRF vulnerabilities; documented SQL injection exploit and parameterised query remediation.</li><li>Automated scan scheduling via Bash and cron; built delta-scan logic to flag newly discovered CVEs and calculate remediation SLA deadlines (Critical=24hrs, High=7 days, Medium=30 days) for patch compliance (remediation tracking) tracking.</li></ul>                                           |                                                          |

## Technical Skills

**SOC Operations:** Alert triage, incident investigation, log analysis, threat detection, escalation, false positive analysis  
**SIEM & Monitoring:** Splunk (SPL), Elastic SIEM (basic), Windows Event Logs, Sysmon, Wireshark  
**Threat Intelligence:** MITRE ATT&CK, IOC analysis, VirusTotal, OSINT enrichment, Cyber Kill Chain  
**Systems & Networking:** Windows internals, Linux fundamentals, TCP/IP, DNS, HTTP/S, firewall and IDS/IPS concepts  
**Automation:** Python, Bash (basic), regular expressions, Compliance, Manage, Manage

## Certifications

- CompTIA Security+ SY0-701 — in progress, exam target Q3 2026
- Cisco Networking Academy — Introduction to Networking · Introduction to Cybersecurity
