Work Experience

Support Operations Specialist *Jun. 2024 – Jan. 2026*
Amazon FBA *Bengaluru, India*

- Triaged 50+ weekly inventory reimbursement cases by severity and policy eligibility, applying structured triage, escalation and decision workflows, producing a daily case triage report
- Investigated root causes of seller claims, identified policy violations and anomalous patterns, and escalated findings to senior reviewers, creating an escalation dossier
- Maintained audit-ready documentation of investigation findings, decisions, evidence notes and corrective actions, resulting in a comprehensive audit log
- Spotted recurring fraud patterns across 200+ weekly cases, flagged them early and reduced repeat-issue investigation time before escalation, updating the fraud alert register

Projects

SOC Automation and Threat Detection Lab | *Python, Splunk, Wireshark, Nmap, MITRE ATT&CK*

- Deployed Splunk SIEM with SPL correlation searches for brute-force detection, lateral movement and privilege escalation; mapped TTPs to MITRE ATT&CK and produced a PICERL incident report.
- Built automated detection pipeline in Python that ingests Splunk alerts, enriches IOCs via VirusTotal API and dispatches Telegram notifications with severity classification.
- Converted detection logic to Sigma rules for vendor-neutral SOC use and performed TCP/IP analysis in Wireshark to identify SYN scans, DNS tunnelling and plaintext credential exposure; delivered a Wireshark analysis report.

Vulnerability Scanner and Patch Prioritization Engine | *Python, Bash, Nessus, OpenVAS, NVD API*

- Built automated vulnerability assessment pipeline in Python that integrates Nessus and OpenVAS REST APIs and generates CVE reports classified by CVSS severity and enriched with EPSS context from the FIRST.org API.
- Developed OWASP Top 10 automated web checker in Python that sends crafted HTTP requests to detect injection, broken authentication and SSRF vulnerabilities; documented SQL injection exploit and parameterised query remediation.
- Automated scan scheduling with Bash and cron, implemented delta-scan logic to flag newly discovered CVEs and organized patch compliance tracking evidence.
