Work Experience

Support Operations Specialist *Jun. 2024 – Jan. 2026*
Amazon FBA *Bengaluru, India*

- Triaged 50+ weekly inventory reimbursement cases by severity and policy eligibility, applying structured triage and escalation workflows, achieving consistent case routing compliance.
- Investigated root causes of seller claims, identified policy violations and anomalous patterns, and escalated findings to senior reviewers for timely resolution.
- Documented audit-ready case records capturing investigation findings, decisions, evidence notes, and corrective actions, ensuring traceable compliance for each case.
- Spotted recurring fraud patterns across 200+ weekly cases, flagging them early to reduce repeat-issue investigation time before escalation, cutting duplicate reviews by 30%.

Projects

SOC Automation and Threat Detection Lab | *Python, Splunk, Wireshark, Nmap, MITRE ATT&CK*

- Deployed Splunk SIEM with SPL correlation searches for brute force detection, lateral movement and privilege escalation, mapped TTPs to MITRE ATT&CK and wrote a PICERL incident report.
- Built an automated detection pipeline where a Python script ingests Splunk alerts, enriches IOCs via the VirusTotal API and dispatches Telegram notifications with severity classification.
- Converted detection logic to Sigma rules for vendor neutral use and performed TCP/IP analysis in Wireshark to detect SYN scans, DNS tunnelling and plaintext credential exposure.

Vulnerability Scanner and Patch Prioritization Engine | *Python, Bash, Nessus, OpenVAS, NVD API*

- Built an automated vulnerability assessment pipeline integrating Nessus and OpenVAS REST APIs in Python, generated CVE reports classified by CVSS severity and enriched them with EPSS context from the FIRST.org API.
- Developed an OWASP Top 10 web checker that sends crafted HTTP requests to detect injection, broken authentication and SSRF vulnerabilities, and documented a SQL injection exploit with parameterised query remediation.
- Automated scan scheduling with Bash and cron, created delta-scan logic to flag newly discovered CVEs and organized patch compliance tracking evidence.
