| <b>SOC Automation and Threat Detection Lab</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <i>Python, Splunk, Wireshark, Nmap, MITRE ATT&amp;CK</i> |
| <ul style="list-style-type: none"><li>• Deployed Splunk SIEM with SPL searches for brute-force detection, lateral movement, and privilege escalation (T1110, T1078, T1059); mapped TTPs and wrote incident report.</li><li>• Developed SOAR-style detection pipeline: Python script ingests Splunk alerts, enriches with VirusTotal API, and dispatches Telegram notifications with severity classification (EPSS 8.5).</li><li>• Converted detection logic to Sigma rules (detection-as-code); performed TCP/IP analysis in Wireshark to detect SYN scans, DNS tunnelling, and plaintext credential exposure on unencrypted sessions.</li></ul> |                                                          |
| <b>Vulnerability Scanner and Patch Prioritization Engine</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <i>Python, Bash, Nessus, OpenVAS, NVD API</i>            |
| <ul style="list-style-type: none"><li>• Developed automated vulnerability assessment pipeline integrating Nessus and OpenVAS REST APIs in Python, generating CVE reports with CVSS severity classification and EPSS scoring from FIRST.org API.</li><li>• Developed OWASP Top 10 automated web checker to detect injection, auth, and SSRF vulnerabilities; documented SQL injection remediation.</li><li>• Automated scan scheduling via Bash and cron; built delta-scan logic for CVE flagging and remediation SLA deadlines (Critical=24hrs, High=7 days, Medium=30 days).</li></ul>                                                          |                                                          |

## Technical Skills

**SOC Operations:** Alert triage, incident investigation, log analysis, threat detection, escalation, false positive analysis  
**SIEM & Monitoring:** Splunk (SPL), Elastic SIEM (basic), Windows Event Logs, Sysmon, Wireshark  
**Threat Intelligence:** MITRE ATT&CK, IOC analysis, VirusTotal, OSINT enrichment, Cyber Kill Chain  
**Systems & Networking:** Windows internals, Linux fundamentals, TCP/IP, DNS, HTTP/S, firewall and IDS/IPS concepts  
**Automation:** Python, Bash (basic), regular expressions, risk, assessment, security

## Certifications

- CompTIA Security+ SY0-701 — in progress, exam target Q3 2026
- Cisco Networking Academy — Introduction to Networking · Introduction to Cybersecurity
