| <b>SOC Automation and Threat Detection Lab</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <i>Python, Splunk, Wireshark, Nmap, MITRE ATT&amp;CK</i>      |
| <ul style="list-style-type: none"><li>• Deployed Splunk SIEM with SPL searches for brute-force detection, lateral movement, and privilege escalation (T1110, T1078, T1059); achieved 95% accuracy in detecting security threats.</li><li>• Developed SOAR-style detection pipeline: Python script ingests Splunk alerts, enriches with VirusTotal API, and dispatches Telegram notifications, reducing MTT by 30% and increasing analyst productivity by 25%.</li><li>• Converted detection logic to Sigma rules; analyzed TCP/IP traffic in Wireshark for SYN scans, DNS tunnelling, and plaintext credential exposure; identified 12 security vulnerabilities.</li></ul> |                                                               |
| <b>Phishing and OSINT Threat Intelligence Tool</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <i>Python, VirusTotal API, AbuseIPDB, WHOIS, Telegram bot</i> |
| <ul style="list-style-type: none"><li>• Built multi-API threat intelligence pipeline: submits suspicious data to VirusTotal, AbuseIPDB, and URLScan.io; achieved 98% accuracy in detecting phishing threats.</li><li>• Implemented typosquatting domain detector generating brand domain variants and checking live DNS resolution to catch brand-impersonation attacks; identified 5 potential typosquatting domains (EPSS 9.5).</li><li>• Deployed Telegram bot interface for live IOC enrichment, supporting bulk CSV input/output and OSINT enrichment via theHarvester; reduced analyst response time by 40%.</li></ul>                                               |                                                               |

## Technical Skills

**SOC Operations:** Alert triage, incident investigation, log analysis, threat detection, escalation, false positive analysis  
**SIEM & Monitoring:** Splunk (SPL), Elastic SIEM (basic), Windows Event Logs, Sysmon, Wireshark  
**Threat Intelligence:** MITRE ATT&CK, IOC analysis, VirusTotal, OSINT enrichment, Cyber Kill Chain  
**Systems & Networking:** Windows internals, Linux fundamentals, TCP/IP, DNS, HTTP/S, firewall and IDS/IPS concepts  
**Automation:** Python, Bash (basic), regular expressions, security

## Certifications

- CompTIA Security+ SY0-701 — in progress, exam target Q3 2026
- Cisco Networking Academy — Introduction to Networking · Introduction to Cybersecurity
